

ST COVID-19 Update

Like all companies globally, ST is closely monitoring the COVID-19 pandemic. In any kind of health crisis, all pharmaceutical companies must contribute their expertise to find answers. A key ST partner is Spanish company PharmaMar, which has announced its novel marine-derived multiple myeloma compound is showing encouraging laboratory results as a promising COVID-19 target. ST hopes to engage with some of Australia's most-respected research authorities to ensure this compound is made available for trial purposes at the earliest opportunity. We also wish to assure our customers that ST has an ample supply of its oncology medicines and we do not foresee any shortages or any impact to patients.

See below for full PharmaMar press release.

PharmaMar reports positive results for APLIDIN[®] against coronavirus HCoV-229E

- These studies have been carried out at the National Biotechnology Centre (Centro Nacional de Biotecnología) of the Spanish National Research Council (CSIC).
- PharmaMar will contact regulatory authorities to analyze the possibilities of studies on patients infected with Covid-19.

Madrid, March 13th, 2020. PharmaMar (MSE:PHM) reports that the in vitro studies results of APLIDIN[®] (plitidepsin) on the human coronavirus HCoV-229E, which has a multiplication and propagation mechanism very similar to COVID-19, have been positive with a potency of the nanomolar order. These studies have been carried out at the National Biotechnology Centre (Centro Nacional de Biotecnología) of the Spanish National Research Council (CSIC) by Dr Luis Enjuanes, Dr Isabel Solá and Dr Sonia Zúñiga.

These results confirm the hypothesis that the therapeutic target of APLIDIN[®] (plitidepsin), which is EF1A, is key to the multiplication and spread of the virus.

With these data, PharmaMar will contact regulatory authorities to analyze the possibilities of studies on patients infected with COVID-19.
