

Under the Sea

Specialised Therapeutics' Spanish partner PharmaMar employs a team of dedicated professional divers who are seeking new solutions for cancer, hundreds of metres below the sea's surface.

We are working closely with our esteemed international partner and have acquired exclusive rights to two cancer compounds of marine origin that are now in late stage development. These compounds may provide new solutions for cancers where there is an unmet need - in multiple myeloma, platinum resistant ovarian cancer and BRCA1&2 mutated metastatic breast cancer, among others.

For a 'deep dive' into PharmaMar's mission, philosophy and expertise, please click on the following video link.
